Tilora

AI Shopping Assistant for Physical Retail.
No app. No waiting. No lost sales.

Retail Intelligence | Powered by AI | Voice & Text

THE PROBLEM

The store experience is broken.

In high-consideration purchases - electronics, appliances, automotive - customers arrive with questions. The result: **lost sales**, **abandoned carts**, **customers who leave to "think about it" and never return**.

96%

left without buying

67%

couldn't find the right product

39%

received poor customer service

Source: Retail TouchPoints

Three pain points.
One solution.

01

CUSTOMER EXPERIENCE

"I need a laptop for SolidWorks"

- Floor staff aren't always familiar with every use case
- Occupied personnel can't provide an individual approach
- Customers don't know what they want

02

RETAIL INTELLIGENCE

"We don't have that right now"

- Retailers struggle to keep up with trends
- Procurement is often done in the blind

03

MARKETING

"This TV has AI features"

- Feature labels often do not explain the real customer benefit
- Staff may not know which AI features matter for each use case
- Premium features need clearer framing to support upsell

THE SOLUTION

An AI expert, available in every aisle.

Tilora is deployed on physical devices in store. Customers interact by voice or text to receive deeply researched product guidance.

Voice & Text

Seamless switching at any point in the session

Deep Research

Live-catalog RAG; open-source LLM path limits token-cost exposure

System Integration

Connects to existing store systems - no manual data entry

HOW IT WORKS

Simple to use. Powerful underneath.

1

Customer Interacts

Voice or text on the in-store totem. No app download, no registration required.

2

AI Researches in Real Time

LLMs query the live product catalog via RAG and agentic search for accurate, contextual answers.

3

Guidance is Delivered

The assistant compares options, answers follow-up questions, and guides the customer to a decision.

4

Data is Captured

Every interaction feeds the analytics dashboard - demand signals, feature priorities, inventory gaps.

VALUE PROPOSITION

Three ways Tilora creates value.

CUSTOMER EXPERIENCE

The Assistant

- Expert guidance at the point of decision
- Handles complex, multi-criteria comparisons
- Reduces routine load on floor staff
- Available across all store hours

RETAIL INTELLIGENCE

Analytics

- Interaction clustering surfaces demand signals
- Identifies inventory and assortment gaps
- Reveals features that drive decisions
- Dashboard with usage & trend reports

RETAILER REVENUE

Marketing Layer

- Configurable product prioritisation & upsell
- Promotes featured or high-margin items
- Supplier-funded placement opportunities
- Campaigns updated without hardware changes

MARKET OPPORTUNITY

A large, fast-moving market.

The market is growing, and retailers are already moving.

42%

of retailers are piloting AI

Additional 34% are still in assessment

TARGET VERTICALS

- Consumer Electronics
- Hardware & DIY
- Home Appliances
- Automotive Showrooms
- Specialised Retail

BUT LOCALLY

Outdated webshops.
Uninformed staff.
Unsatisfied customers.

The Croatian market is ready – and no one has filled this gap yet.

One core offer.
Built to scale.

CORE RETAIL OFFER

Launch-ready AI assistant

A clear rollout model for retailers that want to start fast, validate store impact, and scale usage across locations.

- ✓ In-store AI assistant on selected devices
- ✓ Session capacity scaled by location count
- ✓ Usage monitoring and analytics dashboard
- ✓ Onboarding, support, and continuous optimisation

EUR 500–800

ENTERPRISE FLEX

Custom deployment model

For larger retailers where Tilora needs to match existing systems, workflows, data, and customer journeys.

- ✓ Custom features and recommendation flows
- ✓ CMS, ERP, inventory, or loyalty integrations
- ✓ Higher session limits and multi-location governance
- ✓ Bespoke analytics, SLAs, and dedicated support

EUR 900+

ROADMAP

How we aim to scale.
